The Art of Engineering

Da Vinci Engineering introducing itself:

The Art of Engineering.

We want to pave the way for the success of our customers. This is the main objective of Da Vinci Engineering, our engineering service company.

It is not without reason that our name is related to one of the greatest inventors and engineers from Italy: as a technical pioneer Leonardo da Vinci was way ahead of his time. His innovative ideas and designs serve as a model as well as inspiration. It is our motivation in modern engineering to translate Leonardo da Vinci's standards into perfection and innovation, to constantly develop ourselves in order to achieve the maximum.

Our core competence areas are in the field of engineering, hard- and software development. Whether in the corresponding company department project managers or development services are needed: we support companies with highly qualified engineers, specialists and executives directly on site – all highly motivated, specialized and ready to manage complex tasks. We respond to challenges in our own style: passionate and committed, reliable and with sympathy.

Our customers operate in different areas of the automotive manufacturing and supplier industry. We are working successfully for not only small and medium sized businesses but also international corporations. Our references stand for long term customer relationships. Da Vinci Engineering performs within an international market and has prestigious partners from industry and science. Furthermore, we maintain very good connections to German universities.

In the quest for solutions we combine our creative Italian roots with thoroughness and reliability – while focusing on the essence. We are one of the fastest growing companies in the engineering segment of the German market. Due to our dynamic, we were able to expand our customer base continuously since the founding of our company in 2005 and to double the amount of our employees. Thanks to our sustained growth we are firmly anchored in the market.

Business philosophy:

One who formulates a philosophy, will be judged according to it.
Our results stand for our philosophy.

Commitment. Da Vinci Engineering supports companies to obtain key advantages in the market. We understand service as performance for our customers.

Appreciation. With regards to engineering competences and professionalism, we add high appreciation towards our customers and employees.

Individuality. We do not lose sight of our customers' objectives. Therefore we supply individual solutions, matching complex tasks.

Quality. We solve all of our challenging tasks – with high quality.

Loyalty. Da Vinci Engineering stands for exceptional quality and optimal support, both for customers and employees.

Transparency. Our way of working is always transparent and well-structured. This inspires confidence among us and our customers

Fairness. Reliability and fairness characterize our company and the relation with our customers.

Community. Our employees are the central focus of our company. Their motivation and qualification are the basis of our success.

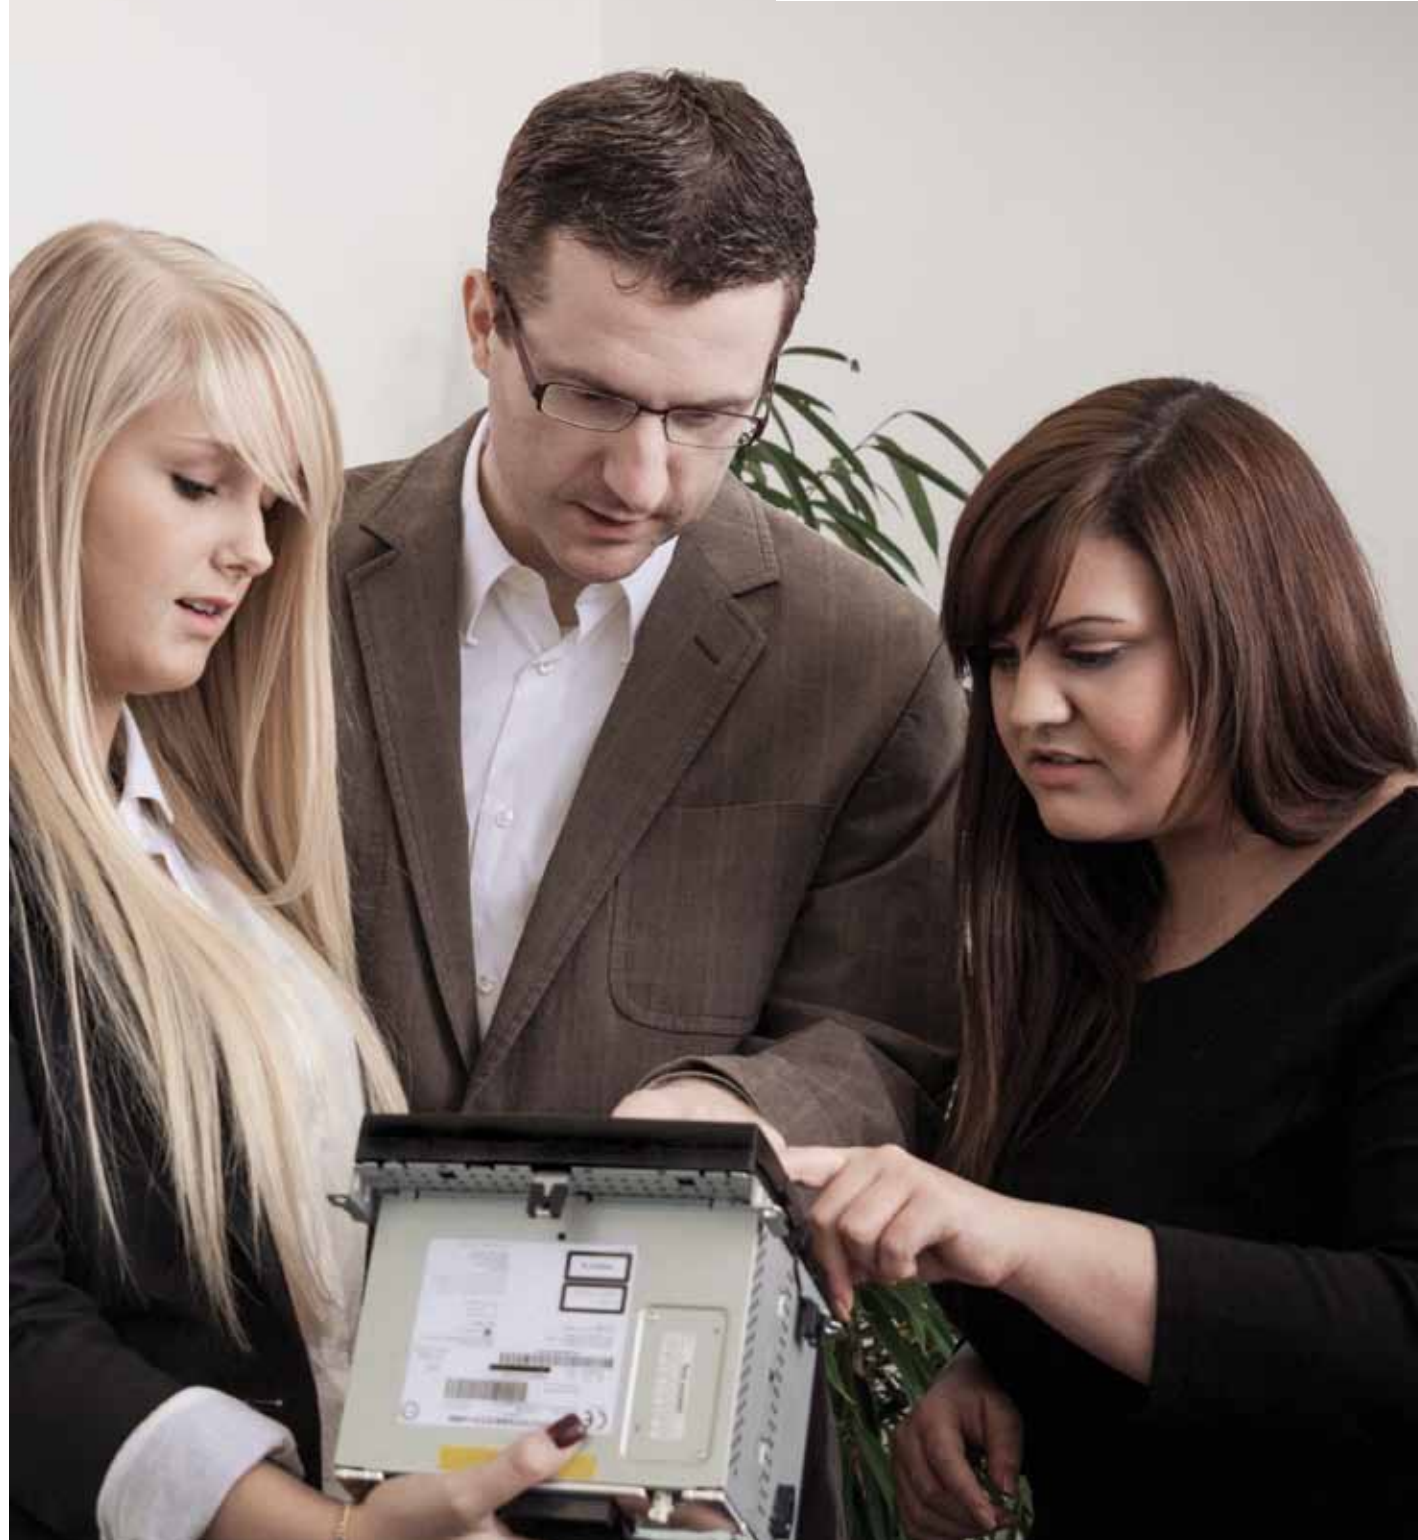

” At Da Vinci Engineering employee recognition is not only business philosophy, but also practice! In this way the relationship between colleagues is a very special one – and our customers appreciate it as well. “

Dirk Pühl, Team Coordinator

We are living up to our promises.

The collaboration:

Our solutions are custom-made.

We set ourselves very high standards that are at least as high as the standards of our customers: we deal with complex projects, our solutions must be as convincing and individual as that of our customers'.

Our guideline is not the competition, but our customers' demands and the technical feasibility.

There are varied possibilities to collaborate with us: we are either strengthening our customer team on site within the scope of project based temporary employment agreement or we delegate projects defined over a contract for service to our employees. The necessary skills, the required know-how, the project planning and the required number of specialists are defined together with our customers.

The entire period of collaboration – whether for short or long term – is characterized by a flexible personnel and time management. In this way, together with our customers, we overcome staffing bottlenecks and rigid structure.

We are only **satisfied** when we know that our customers are too.
By this we measure our **SUCCESS.**

Our core competence:

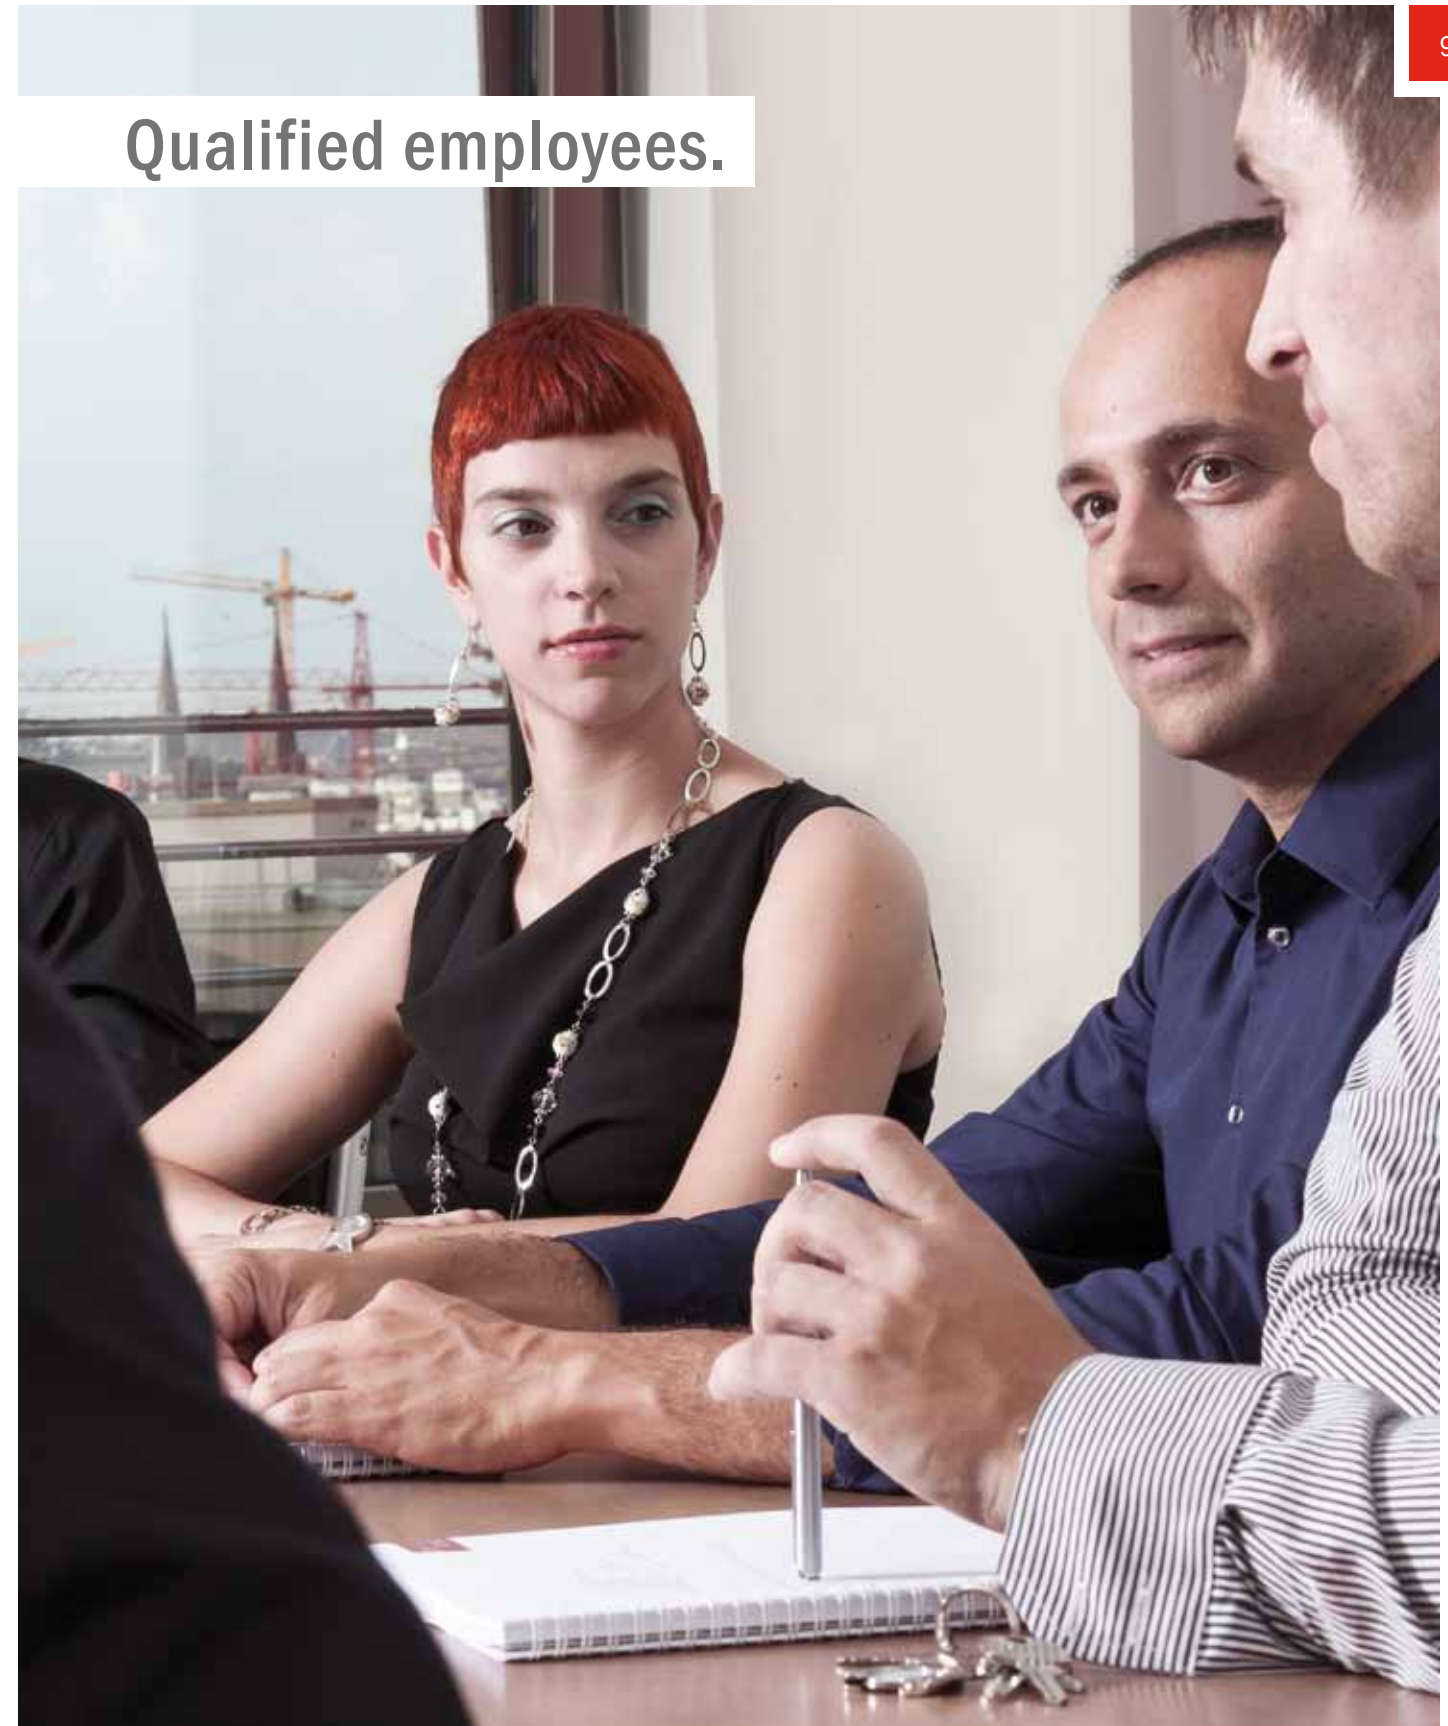

To put it in a nutshell: Da Vinci Engineering has the right experts – individually and as a team.

Our experts stand for custom-made service concepts in the field of engineering. There is no need to state that our engineers are highly qualified, constantly enhancing their know-how, and are experts in their fields. They have international experience and can rely on long standing expertise.

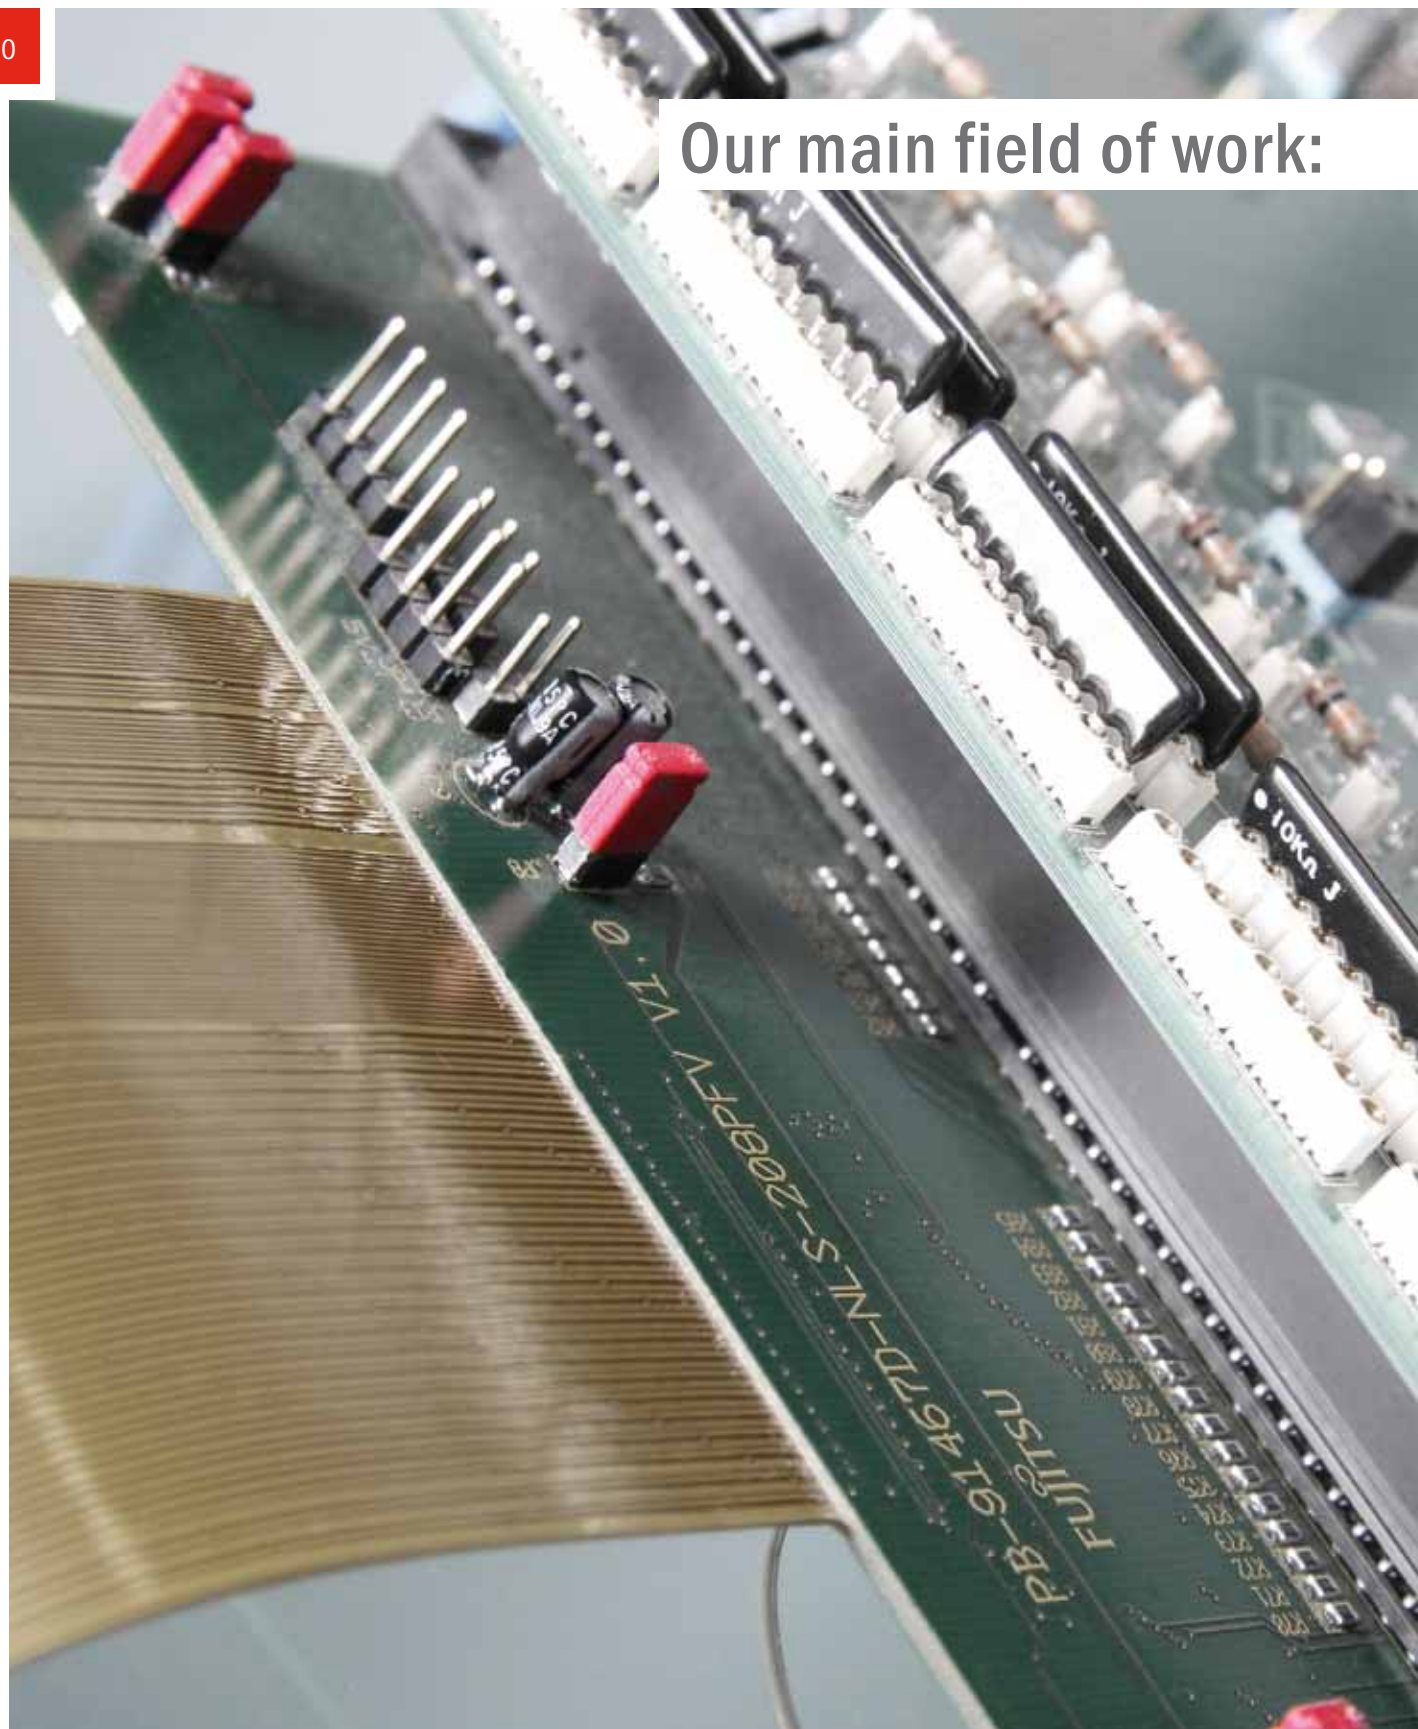

Our employees evolve smart ideas and lead the way with solutions. Their motivation and innovation open up new possibilities, thus realizing customer-oriented solutions – no matter what project or what challenge. They can successfully integrate into each company due to their high interface competences.

Our standard is the
technical feasibility,
our motivation is
common success.

Qualified employees.

Our main field of work:

Development services.

Development services in the automotive sector are the main focus of our specialists.

Electrics or electronics, applications or diagnostics – we sharpen the competences of our customers in this high-tech field through custom-made solutions.

Our engineering specialists work confidently in different project environments. They master the interplay of complex networked systems and bring along the required competences.

Development services

- Hardware development
e.g. ECU-modules, testing systems
- Software development
e.g. Embedded software for micro-controllers
- Diagnostic technique
e.g. on- and off-board
- PC-based tools and application development
- Bus-systems
e.g. CAN, LIN, MOST or FlexRay
- Mechanical engineering
e.g. CATIA and PRO E
- System engineering
e.g. in soft-, hardware and mechanics

Our customers know how to
profit from our strengths
 – through our results.

State of the Art:

Our employees.

Nothing provides more motivation than success.
 Da Vinci Engineering is highly committed to ensuring the success of its own employees.

Da Vinci Engineering considers itself a knowledge base. The know-how of our employees is fundamental in our company. That is why we promote and ensure their long term development. Qualifications, ongoing training courses as well as trainings on the job are the basis for the success of our employees, our company and our customers. Our engineering experts have the best perspectives and chances to achieve their personal goals.

We offer more than a secure job and flat hierarchies. In our company, transparency and fairness are a matter of course. Our mission is to promote teams, to pave new ways for our engineers and customers, to simplify complexity to support professional skills, to strengthen the personality as well as to honor performance and the sense of responsibility. Together with our customers we ensure that open positions and assignments fit perfectly.

With Da Vinci Engineering you have the opportunity to experience different working methods, companies and people. Multi-cultural teams, ambitious challenges and projects in international companies speak for Da Vinci Engineering as an employer. Employees enjoy flexible working arrangements and internal cooperation.

All in all we want to be an employer of which our employees are proud. That is why we can provide excellent references when it comes to win around future employees: which are our current and previous employees.

” Da Vinci Engineering stands for appreciation, motivation and commitment. By promoting and developing employee competences, excellent preparation for challenges in projects are guaranteed. Da Vinci Engineering lives on mutual trust in a family-like atmosphere – just special! “

Rosa Moredi, Development Engineer

Right in the middle.

Da Vinci Engineering is located in the south of Stuttgart directly at the Marienplatz, thus keeping our finger on the pulse of the German automotive industry and being next to our most important customers.

The regional focus of our activities is in Stuttgart and the surrounding region. This brings us closer to our customers and enhances the communication.

The location is also an advantage for our employees: they live and work in one of the most successful economic regions, in a cultural and scenic attractive area.

General manager
Dipl.-Ing. Massimiliano Cava

Your demands are our minimum target.
